

Name: smplayer
Version: 0.5.21
Release: 1
Summary: A great front-end for MPlayer
Summary(ja): smplayer
License: GPL
Group: System Applications/Multimedia
URL: <http://smplayer.sourceforge.net/en/index.php>
Source0: %{name}-%{version}.tar.gz

BuildRoot: %{_tmppath}/%{name}-%{version}-root
BuildRequires: qt-devel, XOrg-libs, XOrg-devel

#Vendor: Project Vine
#Distribution: Vine Linux
Packager: hiroyuki <hiroyuki12@gmail.com>

%description
SMPlayer intends to be a complete front-end for MPlayer, from basic features like playing videos, DVDs, and VCDs to more advanced features like support for Mplayer filters and more. One of the main features is the ability to remember the state of a played file, so when you play it later it will resume at the same point and with the same settings. smplayer is developed with the Qt toolkit, so it's multi-platform.
